

# ITL Site Access Mobile App

Info Sheet

WHERE ENGINEERING  
MEETS PASSION.™

The ITL Site Access Mobile App is designed to create workflow efficiencies for its users by enabling convenient remote access for monitoring and managing tower sites. At the same time, it takes tower safety to a higher level by enabling quicker status updates, adding further value to time-sensitive tower site management.

With the initial release, users are able to conveniently initiate and submit a Site Access Ticket from their mobile device without having to call into ITL's Network Operations Control Center (iNOCC). Once the App has been downloaded and upon saving user profile information, the user simply creates a new ticket and adds the Site ID/ASR number, reason for visit, and details pertaining to the visit. Once submitted, the App auto-closes the corresponding site ticket within 24 hours.

Additional features for upcoming releases include:

- Enhanced security for user and site location verification upon Site Access Ticket submission
- Help & Support Screens with optional user feedback forms and technical support contacts
- And more...

The FREE ITL Mobile App is now available through the Google Play and Apple App Stores.
